Portfolio Website

COMPUTER SKILLS

- Programming: Python, SQL, C++
- ML/AI: PyTorch, YOLOv8, sklearn
- GenAI: RAG, LLM agents, ChromaDB
- Data: Pandas, NumPy, Power BI, Tableau
- Tools: Git, Docker, GitHub Actions, Linux, Streamlit, MATLAB/Simulink
- APIs & Testing: FastAPI, REST APIs, JSON, pytest, CI/CD

SOFT SKILLS

- Project Management
- Team collaboration
- Effective Communication
- Critical Thinking

ACHIEVEMENTS

- Introduction to Generative AI - Duke University
- AI and Machine Learning Algorithms and Techniques - Microsoft
- Trainee - McKinsey Forward Program, 2023 (Digital Evolution)
- Junior Turkish Tennis Champion, 2014

LANGUAGES

- English - Fluent
- German - A2 (B1 course ongoing)
- Turkish - Native

INTERESTS

- AI systems & automation
- Cloud data platforms
- Generative AI & AI Agents
- IoT & Smart Sensors
- Tennis Coach FAU and Regensburg University (2025-...)

EDUCATION

- **M.Eng. Artificial Intelligence for Smart Sensors & Actuators**
  Technische Hochschule Deggendorf, (2025-..) (3rd semester)
  - Application-oriented M.Eng. program focused on intelligent sensor systems.
  - Focus: AI, Machine Learning, Embedded Systems, Big Data, IoT Communication
  - Program taught fully in English.

- **B.Sc. Computer Engineering**
  Kadir Has University, Istanbul (2021-2025) (Graduated)
  - Project-based education, presentation, and working in a team.
  - 100% scholarship, 100% English language.
  - Key coursework: Python, C++, SQL, Data Analysis, Computer Programming, Database Systems, Operating Systems.

EXPERIENCES

- **Data Science Internship**
  Vodafone Türkiye, Istanbul (2025 January -November)
  - Analyzed mobile and fixed broadband KPIs using SQL and DBeaver.
  - Built Tableau dashboards; validated SAP BusinessObjects reports.
  - Turned business requirements into structured analyses and reports.

- **Data Analyst and Digital Trainee**
  KPMG Türkiye, Istanbul (2024 September-January)
  - Built Tableau dashboards and automated reporting workflows in Agile teams.
  - Performed data validation and supported backend logic for analytics platforms.
  - Translated business needs into BI specifications, improving data access.

PROJECTS

- **Medical AI Paper QA – Evaluated RAG Pipeline**
  - RAG over research PDFs with page-level citations (ChromaDB, reranker).
  - Reranker raised right-page retrieval from 0.45 to 0.90 (60-question eval).
  - Live demo + Docker; refuses unanswerable questions; 75 tests in CI.

- **Helmet Detection – End-to-End CV System (YOLOv8)**
  - Trained YOLOv8s for PPE detection (~95% mAP@50, ~100 FPS).
  - Served via a FastAPI REST API (JSON), containerized with Docker.
  - CI/CD: GitHub Actions + pytest tests before every deployment.

- **Low-Altitude Aerial Object Detection (THI x Fraunhofer IVI x THD)**
  - Fine-tuned YOLO models for drone detection at 3–9m altitude.
  - Evaluated performance using mAP and Precision-Recall metrics.
  - Contributed to the inference backend for more stable detections.

- **In-Car Voice Assistant – Multi-Fidelity LLM Evaluation**
  - Tested an LLM car assistant on clean text, ASR errors and noisy speech.
  - Text-only tests caught 1 of 20 real bugs (270 runs, Whisper, ffmpeg).
  - Cheap screening found 2.2x more bugs; one prompt rule fixed 4 failures.
